

ORSO

ELETTROCOSTRUZIONI

Passion and competence in
engineering and construction
of electrical installation and
low voltage cabinets

Electric building, electric cabinets and engineering

ORSO Company was founded in 2000 in the valleys of the Canavese thanks to the long experience of the two original founders.

During these years the **ORSO** company has become a reality with a staff that includes design, factory assembly, building teams and office workers.

The opening in 2009 of the new headquarters in Bairo, which is about 1000 square meters, and the following expansion of other 500 square meters in 2012, have been the sign of the growing of the company and this has allowed the **ORSO** company to further improve the quality of services offered to its customers.

The obtaining of certification **ISO 9001**, in June 2006, has made **ORSO** a company able to offer a complete service with continuous attention to the customer and to the new technologies, in the electrical and automation field.

Partnership

The **ORSO** company has good working relations with companies that work successfully in automation and software development and commissioning of the plants.

This way the company with the help of these partnerships tries to enrich its own service giving an all-round service.

Certificates

- **Certificate ISO 9001 n. 9165.ORSO** obtained with institute of certification CSQ IMQ.
- **Certificate SOA n. 1639/30/00** in category OS16 e OS30 obtained with institute of certification QLP SOA.
- **Qualified supplier Enel n. 316260**

The activity of the company can be divided in three fields:
installations in plant, electric cabinets and engineering.

Each of them is independent, however the company usually deals with the projects that include all business sectors. In fact it is able to provide and manage big projects with a wide-ranging view.

ELECTRICAL INSTALLATION IN PLANT

On site jobs are carried out by qualified operators organized into work teams. The kinds of activities normally performed are the following:

- Electrical cabinet MT/BT
- Industrial and civil electrical installation
- Hydropower division
- Industrial automation
- Systems for remote control and measurement
- Monitoring systems dams.

Engineering and construction of electric low voltage cabinet

ELECTRICAL CABINETS

The production includes the following types of BT cabinet: Power Center cabinet distribution, distribution cabinets Motor Control Center, distribution cabinets for low power, automation cabinets, instrumental control, remote control and protection cabinets.

The production may be made according to the customer's drawing or what to our technical office can provide. Our technicians in both of cases follow the development of the cabinet providing their own expertise.

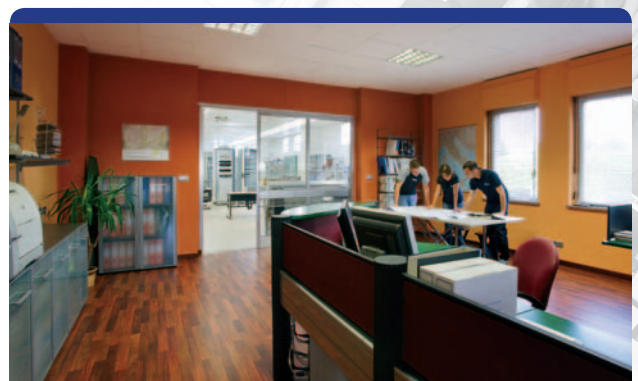

ELECTRIC ENGINEERING

ORSO has its own internal design, made up of a technical staff who has plant and electrical cabinets building experience.

The continuous updating of regulations and efficient procedures that are guaranteed by the Quality Management System, contribute to the development of the plant engineering achievement of safety and high technical level.

Today the company, strongly oriented towards the customer, is able to offer a complete and highly qualified consulting and designing service, and it also gives a good technical support to any target.

All activities are supported by Technical Staff using operational tools constantly updated, such a cad stations, printing and plotting islands, and software specific to the drawings, calculations, and verification
